

Best practice custom lockout procedures

Get expert support to increase workplace safety

Custom lockout procedures implemented at your sites

Brady engineers have created thousands of lockout procedures for hundreds of companies in various industries. Get them to write and implement your best-in-class, company-approved, custom Lockout/Tagout safety procedures as well.

Best practice procedure writing

STEP 1: on-site audit

A credentialed Brady Field Engineer organises a scoping meeting, and will then start collecting data at your premises for each piece of equipment.

STEP 2: procedure writing

Using the collected information, the Field Engineer creates custom, machine-specific illustrated lockout procedures for each piece of equipment. The procedures outline the steps to isolate machines from their energy supply, to release any residual energy, and to check their energy-neutral state.

STEP 3: procedure approval

All lockout procedures are presented via the LINK360 software to facilitate company-approvals, edits and digital or printed communication.

STEP 4: energy source labelling

The Field Engineer labels all energy control points using standard colour-coded energy source ID tags. The tagged energy control points will be referred to in your custom lockout procedures using pictures.

Meet our engineers!

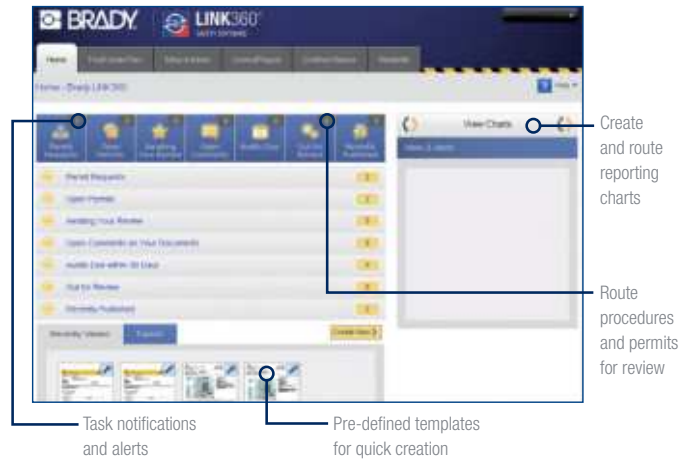

Discover the LINK360™ Software Solution Advantage

Link360™ Software is the first software to give you a complete view of the activities associated with creating, reviewing and updating visual information.

Available in desktop or cloud versions, this software provides an easy way to keep your safety procedures accurate, compliant and sustainable – both in your facility and across multiple locations.

Discover the LINK360™ Software Modules:

Pre-defined templates and the ability to easily add users from any site in your company, create a comprehensive yet easy to use solution to manage your Lockout/Tagout, Reliability and Confined Space activities.

The **Lockout/Tagout Module** focuses on creating and maintaining a safe working environment with tools to help lock out hazardous energy sources. By accessing this module users can:

- Manage Lockout/Tagout programmes to perform maintenance on machinery.
- Create visually instructive safety procedures, tags, and energy source labels for printing.
- Meet regulatory requirements and industry standards on lockout of hazardous energy sources.
- Free mobile app for iOS or Android, mobile phones and tablets.

The **Reliability Module** provides tools to streamline regular equipment checks. By accessing this module users can:

- Manage the creation of visually instructive maintenance procedures that assist operators, engineers, and technicians in maintaining machine equipment performance levels.
- Control access to who may view, edit, and create templates and procedures.
- Free mobile app for iOS or Android, mobile phones and tablets.

The **Confined Spaces Module** allows users to compile assessments, create permits, and track history for confined space permitting.

- Identify confined space hazards and classify a space as a 'permit required' confined space.
- Entrants are able to fill out permission requests online for approval.
- Permission history is logged for future audits and reporting.
